ArcelorMittal Tubular Products Karviná increased its investments by 15%

The manufacturing company in Karviná is investing tens of millions of Czech crowns this year to improve the efficiency of production facilities, production automation, and reducing the energy consumption of buildings in the Czech Republic. ArcelorMittal Tubular Products Karviná plans to implement 15 investment projects, representing a 15% increase in investments compared to last year. The projects will, for example, focus on the automation of packaging in two production lines, decentralization of heating in buildings on the company's premises, reconstruction of roofs in production areas, and safety measures in the painting line. The main suppliers of investment projects are expected to be companies from the Czech Republic.

ArcelorMittal: the goal is zero emissions by 2050

ArcelorMittal Europe Group has committed to reducing CO₂ emissions by 35 % by 2030, with an ambitious target of achieving zero emissions by 2050. The XCarb® brand brings together ArcelorMittal's products with reduced, low, and zero carbon content, steel

production activities, innovative environmental projects, and other initiatives into a single effort to make demonstrable progress towards carbon-neutral steel. Watch the [introductory video](#) to learn more.

Europe-wide OSH training for managers

The managers of ArcelorMittal Europe – Tubular Products production plants participated in a special seminar focused on safety and health protection. The aim of the workshop was to review annual goals in the field of

workplace safety and health and establish new guidelines. ArcelorMittal's group policy on workplace safety and health primarily involves supportive and empowering leadership, consideration of safety and health in all decision-making processes, continuous improvement, and well-maintained facilities with preventive controls.

Karviná has a new addition to the team - Mr. Tube introduces himself

Health and safety at work are the top priority within the ArcelorMittal Europe – Tubular Products group, which includes the production plant in Karviná. Mr. Tube will oversee the correctness of safe working practices to help ensure that all employees remain safe and healthy while working. The new mascot is a symbol of values and culture for the Europe-wide steel tube and profile manufacturer.

JÄKL steel profiles are "protected" in other countries around the world

ArcelorMittal Tubular Products Karviná has successfully defended and expanded the registration of its international trademark (logo and name) for its product brand JÄKL. The registration is valid not only in the member countries of the European Union but also in other non-EU countries, such as Switzerland and North Macedonia. The trademark registration will strengthen awareness of the JÄKL brand and help the company solidify its presence in other international markets.

CEO's meeting with former employees

In April of this year, René Fabik, the Chairman of the Board of ArcelorMittal Tubular Products Karviná,

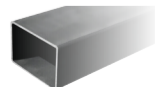

attended the traditional meeting with former employees of the Karviná unit. During the meeting, he provided updates on the current affairs within the company, among other information.

The Open Day 2023 was a great attraction

On May 1st, the traditional Open Day and Family Day took place at the company's premises in Karviná. The event offered not only guided tours of the production halls and facilities but also a rich program for 150 visitors of all ages. Throughout the day, children had the opportunity to enjoy various fun games and attractions. The crew of the Karviná Fire Department received a great applause for their demonstration of rescuing a person from a height using modern techniques and equipment. Refreshments were provided for all participants.

Did you know that... JÄKL is celebrating its 105th anniversary this year?

JÄKL steel profiles, primarily known for their top-quality attributes including precise dimensions, long-term stability, and reliable delivery, are used in a wide range of industries, including construction, engineering, and agriculture. The production plant of ArcelorMittal Tubular Products Karviná is a key supplier of these profiles throughout most of Europe.
